

Dissertation dev log

Week 8:

Current Goals for prototype session:

- A working way of profiling the results of the prototype
- A Critical Review of current technology is completed, that highlights where the gap in research is, and the how this project fills it.
- Readme that highlights development roadmap
- A methodology for how the project is going to be researched, and how its going to be evaluated
- Project is ethically robust
- Profiling results that are easily replicated and are well documented.
- Project plan with gantt chard

Current Strech goals for prototype:

- Fracture implemented in both OpenGL and Vulkan
- Voronoi clipping implemented
- A way to interact with the fragmented mesh
- An implementation in GLSL, for performance comparison

Completed:

- A working Voronoi fracture in 2D for demonstration
- Working Voronoi fracture in 3D
- Comprehensive background done, covering triangulation, fracturing methods used in games, Graphics API's, Performance of Graphics API's, Point sampling, and Voronoi Clipping.
- Clearly stated research question
- Clear, feasible hypothesis, that is well scoped.
- An introduction that provides clear context for the project, and explains the need for the research, including positive impacts and who benefits. It should also highlight the motivation for the project.
- Professional, ethical, sustainable, legal, and social review carried out.
- A plan for security and privacy concerns has been written, and data is well managed.

Development notes:

Spent this week mainly working on my Vulkan implementation, almost got a working vulkan implementation, should be ready by next week. Completed my PESLS section and outlined my plan for data storage. There wasn't any challenges to consider this week, apart from vulkan design decisions.
